KABSU Inventory Application User Documentation

The purpose of this document is to provide users of KABSU Inventory Application how to use the program. Specifically, how to set up the database, run the program, and use features within. The KABSU Inventory Application allows you to interact with KABSU client data in a variety of ways.

Files and Applications Needed

All files necessary will be available on GitHub through the following link:

https://github.com/GradySalzman/KABSU-Inventory-App

Necessary programs are MySqlWorkbench:

https://dev.mysql.com/downloads/workbench/

I. Setup Database

Open MySqlWorkbench run all the queries in the file DatabaseSetup.sql. If DatabaseSetup.sql successfully completed then no errors will be displayed in the MySqlWorkbench console. If DatabaseSetup.sql successfully ran, then run LoadData.sql. If

both successfully complete then run LoadSample.sql. The database should now be up and ready to be used by the program.

II. How to start program

When the database is successfully set up, run the kabsu.exe. The program should open and the following screen should be displayed.

XXXXXXINSERT START SCREEN SHOT

III. Features

a. Search Feature
